Subsoiler

Breaking the Crop Yield Barrier

Eliminates soil compaction to improve soil structure

Facilitate Proper air circulation & water infiltration in land

Facilitate Deeper roots growth for fast plant growth & healthy plant

Increase Plant yield upto 50%

SHAKTIMAN Subsoiler is a primary tractor mounted implement used to loosen, mix and break up the soil compaction at depths below the level of a traditional tillage. It's a tillage tool which improve growth & yield in all crops where soil compaction is a problem.

Most tractor mounted cultivation tools will break up and turn over surface soil to a depth of 15-30 cm while a SHAKTIMAN subsoiler can break up soil compaction and loosen the soil to almost twice those depths.

This deeper loosening can increase fissuring which improves aeration and infiltration of water, and creates a greater volume for the development of roots

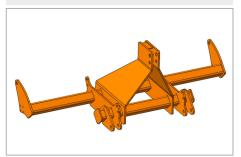

SHAKTIMAN Subsoiler guarantee the elimination of soil compaction.

Traditional VS Sub Soiling Tillage Method

Parameters	Subsoiling Method	Traditional Tillage
Crop roots growth	High	Poor
Soil water infiltration	Excellent	Bad
Soil air circulation	Enough	Restricted
Soil Porosity	Very High	Low
Plants nutrients uptake capacity	High	Low
Yield	Enhance	Stagnant

Silent Features

Frame made of high tensile material

- Robust & Sturdy
- Long life of implement compare to all local Subsoiler

Blade and Tine made of Boron Steel

- Easily breakup hard & compacted layers
- Facilitate penetration of shank / tine
- Self sharpening of blade
- Long life & less maintenance cost
- Capable of land force absorbing

Tine protection cover

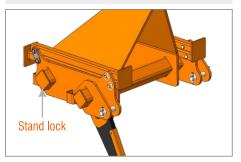

- No direct wear & tear of tine save cost
- After waring of cover just need to replace
- · Save / Protect tine from big stones & heavy roots

Working width adjustment

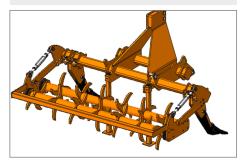

By loosening of bolts working width can easily adjusted

Stand locking provision

While working on field no need to put stand on field

Roller/Clod Cracker

· With & Without Roller option available
